

KeySpy for DOORS

KeySpy™ for DOORS® is a powerful Administration tool that enables you to analyse, manage and replicate the structure of a IBM® Rational® DOORS project. Graphical and HTML reports are generated showing exactly what's there: folders, modules, attributes and views are all analysed and presented to the lowest level of detail.

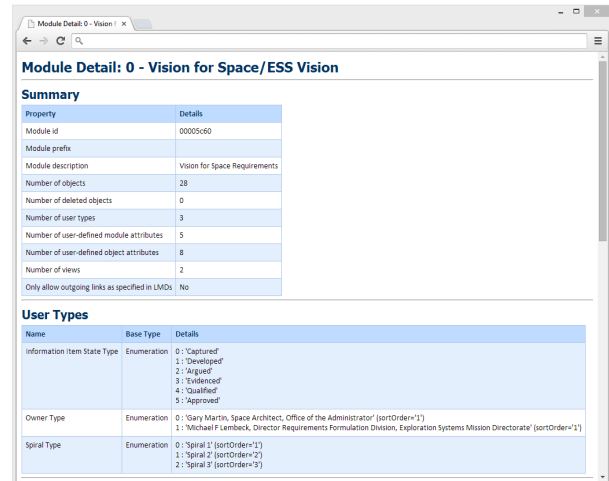

Easily Manipulate Data Models

The project information model can be saved as an XML configuration file, enabling multiple projects with identical schemas to be instantiated. Schemas under development can be automatically populated with test data and links. Attributes, types, and views can be exchanged between projects in any DOORS database.

Produce Detailed Structure Reports

The HTML structure reports provide a detailed breakdown of the project or module showing: types, attributes, views, and linksets.

Benefits

- Rapidly analyse any DOORS project to the lowest level of detail
- Easily troubleshoot schema problems
- Quickly and reliably generate new DOORS projects based on an existing schema
- Improve process compliance through ability to audit and monitor schemas
- Rapidly develop, test and roll-out schemas

Features

- Analyse any DOORS project schema
- Graphical representation of the project including: Folder, Modules (formal and link), attributes, attribute types and views
- Export HTML reports: Project Summary, Project Detail and Module Detail
- Save and load XML project configuration files
- Clone projects
- Automatically populate modules with test information, text and links
